

BUILDING ENGINEERED ENVIRONMENTS

Protecting People, Property, Equipment, and the Environment

Facilities Managers, Engineers, Architects,
Designers & Building Operations Teams

Indoor Air Quality, Humidity Management,
Air Pollution Control & HVAC Energy Efficiency

FMOP GMM | July 16, 2026

WHY ENGINEERED ENVIRONMENTS **MATTER**

Facilities management is no longer just about maintenance — it is about protecting people, assets, and performance.

PEOPLE

- Comfort, health, and well-being
- Safer, more productive workplaces

ASSETS

- Protect equipment, finishes, and infrastructure
- Extend asset life and reduce costs

PERFORMANCE

- Energy Efficiency
- Operational Continuity
- ESG Compliance

THE ENVIRONMENT

- Air Pollution
- Resource Conservation and Management
- Reduce Solid & Water Waste

CLIMATE PROOFING YOUR BUSINESS & FACILITIES

ENGINEERING INDOOR ENVIRONMENTS THAT
REMAIN SAFE, CONSISTENT AND RELIABLE.

Why Climate-Proofing Matters

As climate conditions become more unpredictable, buildings face increasing challenges from external climate factors.

Creating engineered environments helps facilities remain safe, efficient, and operational while protecting occupants, equipment, and business continuity.

RISING TEMPERATURES

More heat means higher cooling demand, equipment stress, and productivity loss.

EXTREME WEATHER EVENTS

Heavy Rains, Typhoons, El Niño, La Niña, Haze, Ash fall, etc.

HUMIDITY & IAQ CHALLENGES

High humidity, poor air quality, and pollutants threaten comfort, health, and compliance.

ENERGY COST PRESSURES

Inefficient systems consume more energy and strain operational budgets.

BUSINESS CONTINUITY AT RISK

Unprepared facilities face downtime, revenue loss, and reputational damage.

KEY ENVIRONMENTAL CHALLENGES IN FACILITIES

Common Pain Points Affecting Building Performance

High Humidity

Condensation, Cooling
Impact, Mold, and
Material Damage

Poor Indoor Air Quality

Occupant Discomfort,
Low Productivity, and
Health Concerns

Dust & Particles

Contamination and
cleaning burden

Smoke & Odor

Occupant Complaints and
Environmental Compliance

Cooling Failures

Hot Spots, Emergency
Cooling, and Unstable
Conditions

Rising HVAC Energy Use

Higher operating costs
and inefficiency

AN INTEGRATED FACILITIES STRATEGY

A practical way to move from reactive fixes to engineered control.

01

ASSESS

Baseline Humidity, Temperature, PM2.5, CO₂, TVOC, Ventilation, Odor Issues, and other complaints

02

PRIORITIZE

Identify critical spaces and high-risk issues

03

IMPLEMENT

Deploy targeted solutions and operating changes

04

MONITOR & IMPROVE

Track results, refine settings, and sustain gains

FMOP GMM | July 16, 2026

FROM SYMPTOMS TO ROOT CAUSES

Connect facility complaints to the environmental conditions behind them.

1

COMPLAINTS

Odors, Discomfort,
Recurring Issues

2

MEASUREMENTS

RH, Temperature,
PM2.5, CO2,
Ammonia, H2S,
TVOC, HCHO &
Airflow

3

ROOT CAUSES

Moisture, Ventilation
Gaps, Contaminants,
and More

4

CONTROL PLAN

Targeted Fixes,
Operating Changes,
Monitoring

Better Diagnosis Leads to
Smarter Investments and
Fewer Repeat Problems.

SYSTEM DIAGNOSTICS

BUILDING ENVIRONMENT OVERVIEW

TEMPERATURE

24.2 °C

RELATIVE HUMIDITY

48%

CO₂

620 ppm

PALS

12 µg/m³

AIRFLOW

1,250 CFM

SYSTEM HEALTH

92%

GOOD

ROOT CAUSE ANALYSIS

- ✓ High Humidity
Contributing Factor
- ✓ Inadequate Ventilation
Contributing Factor
- ✓ Particulate Load
Contributing Factor

✓ Root Cause Identified
Ventilation Imbalance + High Humidity

CORE SOLUTION AREAS

Integrated Design and Systems Can Address
Multiple Environmental Risks.

Humidity Control
Stabilize Humidity and
Moisture Levels to
Acceptable Standards

Cooling
Manage hotspots
and comfort

Indoor Air Quality
Improve Indoor Air Quality
Through Mechanical Means
and Technology

Air Pollution Control
Treat Air Before
Discharging Out Of The
Building To Comply With
Environmental Standards

Smoke & Odor
Improve air perception
and control nuisance
issues

Dust
Reduce particulate
load in sensitive spaces

HVAC Energy Savings
Lower waste while
sustaining performance

PROJECT TYPES AND APPLICATIONS

Where integrated environmental control makes a difference.

BPO / Offices

Buildings

Hospitals

Hotels

Data Centers

Factories

Logistics Facilities

Cold Storage

Commercial Kitchens

Restaurants

Homes

More

The right solution depends on the facility, the risk, and the operating goal.

FMOP GMM

July 16, 2026

PROVIDING SYSTEMS AND SOLUTIONS FOR:

AHU and FCU

Fresh Air Handling Units/DOAS

Storage Areas

Renovation Areas

Kitchen Exhaust

Food Courts / Pantry / Cafeteria

Production Areas

Operating Rooms

STP Rooms and Exhaust

Server Rooms / Data Centers

Gyms

Laboratories

MRF

Electrical and Machine Rooms

Cinemas

Toilets

PLC Control Rooms/Cabinets

Food Courts

Basements

Locker Rooms

Smoking Rooms (DSA)

Offices

and more

Tailor-Fitted **Solutions** As Every Space and Problem is Unique

FMOP GMM

July 16, 2026

OUR TYPICAL ENGAGEMENT APPROACH

How a 1-on-1 learning consultation can turn issues into action.

Discovery

Understand the site, issues, and goals

Walkthrough

Review critical spaces and operating conditions

Problem Mapping

Connect symptoms to likely root causes

Options

Explore solution paths and priorities

Recommendations

Define practical next steps

Goal: Provide A Lasting Engineered Solution to Eliminate Problems and Not Just a Band Aid Solution

FMOP GMM | July 16, 2026

LET'S TALK

Tailor-Fitted Discussions For Your Facility.

Facility Types Include:

BPO / Offices, Buildings, Hospitals, Hotels,
Data Centers, Factories, Logistics Facilities,
Cold Storage, Commercial Kitchens, Restaurants,
Homes, and more.

Continue the conversation
with a 1-on-1 learning consultation
and collaboration session.
